

## Policy on Conflict Minerals

The U.S. Securities and Exchange Commission (“SEC”) adopted final rules to implement reporting and disclosure requirements related to Conflict Minerals, as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010. The rules require manufacturers who file certain reports with the SEC to disclose whether the products they manufacture or contract to manufacture contain Conflict Minerals that are necessary to the functionality or production of those products. The definition of Conflict Minerals refers to gold, as well as tin, tantalum, and tungsten, the derivatives of cassiterite, columbite-tantalite, and wolframite, regardless of where they are sourced, processed or sold. The U.S. Secretary of State may designate other minerals in the future. ADM Tronics supports these requirements to further the humanitarian goal of ending violent conflict in the Democratic Republic of the Congo (DRC) and in surrounding countries, which has been partially financed by the exploitation and trade of Conflict Minerals.

Our Commitment:

1. Support the aims and objectives of the U.S. legislation on the supply of Conflict Minerals.
2. To not knowingly procure specified metals that originate from facilities in the Conflict Region that are not certified as Conflict Free.
3. Ensure compliance with these requirements, and ask our suppliers to undertake reasonable due diligence with their supply chains to assure that specified metals are being sourced only from:
  - Mines and smelters outside the Conflict Region or
  - Mines and smelters which have been certified by an independent third party as Conflict Free if sourced within the Conflict Region.

This due diligence includes having our suppliers provide written evidence documenting that raw materials used to produce gold, tin, tantalum and tungsten, used in the materials to manufacture components and products supplied to ADM Tronics, originate from outside the Conflict Region or if they originate from within the Conflict Region, that the mines or smelters be certified as Conflict Free by an independent third party. The aim is to ensure that only Conflict Free materials and components are used in products that we procure.

If we discover the use of these minerals produced in facilities that are considered to be non-Conflict Free, in any material, parts or components we procure, we will take appropriate actions to transition such product to be Conflict Free.

Very truly yours,

Andre’ DiMino  
President
